No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The peptides of the invention have: (a) cytolytic activity on CC invention. The peptides of the invention have: (a) cytolytic activity on CC pathogenic cells (pathogens and malignant cells not naturally present in CC the body); but (b) no haemolytic activity, or such activity only at a concentration significantly higher than that at which they lyse pathogens. The peptides, their complexes and mixtures are used to treat CC infections (caused by bacteria, fungi, protozoa, mycoplasma or viruses) or cancer, in human and veterinary medicine. Also, they can be used as agricultural pesticides. The absence of haemolytic activity (associated with disturbance of alpha helical structures) means that the peptides thave few if any toxic effects, and those that include D-aa will have conceased resistance to proteolytic degradation. Non-haemolytic, cytotoxic random copolymers of pardaxin, each has a specific spectrum of activity, allowing selection of agents for particular applications. Since these random copolymers induce total lysis of bacterial cell walls, cresistance to them is unlikely to develop.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match 100.0%;

This sequence represents a Leu/Lys diastereomer peptide of the cinvention. The peptides of the invention have: (a) cytolytic activity on the peptides of the invention have: (a) cytolytic activity on the peptides of the invention have: (a) cytolytic activity on the peptides of the invention that all snot naturally present in the body); but (b) no haemolytic activity, or such activity only at a concentration significantly higher than that at which they lyse concentrations (caused by bacteria, fungi, protoxo, mycoplasma or viruses) are used to treat to infections (caused by bacteria, fungi, protoxo, mycoplasma or viruses) or cancer, in human and veterinary medicine. Also, they can be used as preservatives for food, cosmetics and agricultural produce, or as agricultural pesticides. The absence of haemolytic activity (associated with disturbance of alpha-helical structures) means that the peptides thave few if any toxic effects, and those that include D-aa will have concreased resistance to proteolytic degradation. Non-haemolytic, cytotoxic random copolymers of pardaxin, each has a specific spectrum of activity, allowing selection of agents for particular applications. Since these tandom copolymers induce total lysis of bacterial cell walls, cresistance to them is unlikely to develop.
                                                                                                                                                                                                                                                                                                                                                            Query Match 100.0%;

The cytolytic agents may be used for treatment of cancer or for treatment of several diseases caused by pathogens, including bacterial, fungal, viral, mycoplasma and protozoan infections. They may be used in both human and veterinary medicine. They may also be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present peptide is used to produce the agents of the invention. The specification describes a non-haemolytic, cytolytic agent, which is a peptide, a complex of bundled peptides, a mixture of peptides or a random peptide copolymer. The agent has a selective cytolytic activity on pathogenic cells. The agent is selected from a cyclic derivative of a peptide which has a net positive charge greater than 1, comprises 1-amino
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New non-haemolytic cytolytic agent useful in treating cancer infections - is a peptide comprising a moiety which disrupts continuity of an alpha-helical structure

The cytolytic agents may be used for treatment of several diseases caused by pathogens, including bacterial, fungal, viral, mycoplasma and protozoan infections. They may be used in both human and veterinary medicine. They may also be used as disinfectants for destruction of microorganisms, i.e. in solutions for wetting contact lenses, as preservatives, e.g., in the cosmetic and food industries, as pesticides (e.g. fungicides or bactericides) or for preservation of agricultural products.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present peptide is used to produce the agents of the invention. The specification describes a non-haemolytic, cytolytic agent, which is a peptide, a complex of bundled peptides, a mixture of peptides or a random

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WPI; 1998-594464/50
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Oren
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      (YEDA ) YEDA RES & DEV CO LTD
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       20-FEB-1997;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      19-FEB-1998;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              peptide copolymer. The agent has a selective cytolytic activity on pathogenic cells. The agent is selected from a cyclic derivative of a peptide which has a net positive charge greater than 1, comprises L-amino acid residues and/or D-amino acid residues and comprises an alpha-helix
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      continuity of an alpha-helical structure

The present peptide is used to produce the agents of the invention. The CS specification describes a non-haemolytic, cytolytic agent, which is a CC peptide, a complex of bundled peptides, a mixture of peptides or a random CC peptide copolymer. The agent has a selective cytolytic activity on pathogenic cells. The agent has a selected from a cyclic derivative of a comprises in a comprise of a peptide which has a net positive charge greater than 1, comprises in a light helix comprises of a peptide (or cyclic derivative of this) which comprises the comprise of the comprises of the comprises of the comprise of the comprises of the comprises of the comprise of the cyclic derivative of this pations of the cyclic derivative of the cyclic derivative of the cyclic of comprises of the cyclic derivative and sequence such that a corresponding amino acid sequence comprising only in a cid residues of a corresponding amino acid sequence comprising only in a cyclic derivative of the cyclic agents may be used for treatment of contact agents and protozoan infections. They may be used in both human and veterinary medicine. They may also be solutions for wetting contact lenses, as preservatives, e.g., in the committee of the cyclic derivative, as posticides (e.g. fungicides or bactericides) or for preservation of agricultural products.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   뫄
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CC fc domain, pharmacologically active peptides, and linkers. Where (I) is:

CC (X1)a+F1-(X2)b, where: F1 = an Fc domain; X1 and X2 = are each

CC independently selected from -(L1)c-P1 -(L2)d-P2 -(L2)d-P2.

CC (L1)c-P1-(L2)d-P2-(L3)e-P3, or -(L1)c-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4

CC where P1, P2, P3, and P4 = are each independently sequences of

CC pharmacologically active peptides; L1, L2, L3, and L4 = are each independently

CC independently linkers; and a, b, c, d, e, and f = are each independently

CC or 1, provided that at least 1 of a and b is 1. The composition can

CC have cytostatic, antiasthmatic, thrombolytic and immunosuppressive

CC activities. DNas, vectors and host cells from the present invention can

CC useful for treating cancer, asthma, thrombosis, or autoimmune diseases.

CC The use of an Fc domain (rather than a Fab domain) can provide a longer

CC half-life or incorporate functions such as Fc receptor binding, protein

CC h binding, complement fixation, and possibly placental transfer. AAA69443

CC constant of the procession of the present invention acid

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CC sequence represents a diastereomer peptide of the invention. This CC sequence is used in a "bundle sequence", which is created by binding 5 CC copies of this sequence to peptide 23 (see ANM35149). The peptides of CC copies of this sequence to peptide 23 (see ANM35149). The peptides of CC and malignant cells not naturally present in the body; but (b) no CC haemolytic activity, or such activity only at a concentration CC significantly higher than that at which they lyse pathogens. The CC peptides, their complexes and mixtures are used to treat infections CC (caused by bacteria, fungi, protozoa, mycoplasma or viruses) or cancer, CC in human and veterinary medicine. Also, they can be used as preservatives CC for food, cosmetics and agricultural produce, or as agricultural CC disturbance of alpha-helical structures) means that the peptides have few CC disturbance of alpha-helical structures) means that the peptides have few CC if any toxic effects, and those that include D-aa will have increased CC resistance to proteolytic degradation. Non-haemolytic, cytotoxic random CC copolymers of pardaxin, each has a specific spectrum of activity. CC allowing selection of agents for particular applications. Since these CC random copolymers induce total lysis of bacterial cell walls, resistance CC contents is unitkely to develow.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Fc domain, pharmacologically active peptides, and linkers. Where (I) is:

(Xl)a-Fl-(X2)b, where: Fl = an Fc domain; Xl and X2 = are each

independently selected from -(Ll)c-Pl, -(Ll)d-Pl-(L3)d-P2.

(Ll)c-Pl-(L2)d-P2-(L3)e-P^3, or -(Ll)c-Pl-(L2)d-P2-(L3)e-P3-(L4)f-P4

where Pl, P2, P3, and P4 = are each independently sequences of

pharmacologically active peptides; Ll, Li2, Li3, and Li4 = are each independently

clindependently linkers; and a, b, c, d, e, and f = are each independently

clindependently linkers; and a, b, c, d, e, and f manunosuppressive

activities. DNAs, vectors and host cells from the present invention can

be used for producing pharmaceutical compositions. The compositions are

useful for treating cancer, asthma, thrombosis, or autoimmune diseases.

The use of an Fc domain (rather than a Fab domain) can provide a longer

half-life or incorporate functions such as Fc receptor binding, protein

A binding, complement fixation, and possibly placental transfer. AAA6943

cancer or for treatment of several diseases caused by pathogens, including bacterial, fungal, viral, mycoplasma and protozoan infections. They may be used in both human and veterinary medicine. They may also be used as disinfectants for destruction of microorganisms, i.e. in solutions for wetting contact lenses, as preservatives, e.g., in the cosmetic and food industries, as pesticides (e.g. fungicides or bactericides) or for processing of sample and products.
                                                                                                                                                                                                                                           acid residues and/or D-amino acid residues and comprises an alpha-helix breaker modety, or a peptide (or cyclic derivative of this) which (comprises L-amino acid residues and D-amino acid residues, has a net positive charge greater than 1 and has an amino acid sequence such that a corresponding amino acid sequence comprising only L-amino acid residues is not found in nature. The cytolytic agents may be used for treatment of
                                                                                                                                                                                                                                                                                                                                                                                                                specification describes a non-haemolytic, cytolytic agent, which is a peptide, a complex of bundled peptides, a mixture of peptides or a random peptide copolymer. The agent has a selective cytolytic activity on pathogenic cells. The agent is selected from a cyclic derivative of a peptide which has a net positive charge greater than 1, comprises L-amino
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New non-haemolytic cytolytic agent useful in treating cancer or infections - is a peptide comprising a moiety which disrupts the continuity of an alpha-helical structure
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      WPI; 1998-594464/50

A CONTROL OF THE CONT

acids which

are not to

be modified

New modified peptide(s) - obtained by substitution with an amino acid which is modifiable by a reaction and replacing other amino

Claim 7;

Page

33pp; English

8x35555555555555

The peptides AAW77376-W77390 can be modified by the method of the period invention by substituting at least one amino acid of the peptide to provide a peptide having at least one amino acid which is modifiable by a reaction and replacing other amino acids in the peptide with amino acids which are not modifiable by the reaction. The methods can be used for the modification of biologically active peptides such as hormones, toxins and peptides which act on lipid bilayer membranes. The modified peptides can be used e.g. in the body of an animal or plant or parts in order to affect the structure or integrity or permeability of a foreign body such as a microorganism, parasite or virus present in the body of the animal or plant or within the cells of the body of the animal

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAW82858
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Non-haemolytic; cytolytic; selective cytolytic activity; pathogen; cancer; infection; disinfectant; contact lens wetting solution; preservative; pesticide; fungicide; bactericide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               19-MAY-1999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Antipathogenic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       W09837090-A1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Synthetic
specification describes a non-haemolytic, cytolytic agent, which is a specification describes a non-haemolytic, cytolytic agent, which is a peptide, a complex of bundled peptides, a mixture of peptides or a random peptide copolymer. The agent has a selective cytolytic activity on pathogenic cells. The agent is selected from a cyclic derivative of a pathogenic cells. The agent is selected from a cyclic derivative of a cid residues and/or D-amino acid residues and comprises an alpha-helix breaker moiety, or a peptide (or cyclic derivative of this) which breaker moiety, or a peptide (or cyclic derivative of this) which positive charge greater than 1 and has an amino acid sequence such that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New non-haemolytic cytolytic agent useful in treating cancer infections - is a peptide comprising a moiety which disrupts continuity of an alpha-helical structure
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      19-FEB-1998;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       27-AUG-1998

The present peptide is used to produce the agents of the invention. The cspecification describes a non-haemolytic, cytolytic agent, which is a cc peptide, a complex of bundled peptides, a mixture of peptides or a random cc peptide copolymer. The agent has a selective cytolytic activity on cc peptide which has a net positive charge greater than 1, comprises L-amino cc peptide which has a net positive charge greater than 1, comprises L-amino ccid residues and/or D-amino acid residues and comprises an alpha-helix c comprises L-amino acid residues and D-amino acid residues, has a net c (comprises L-amino acid residues and D-amino acid residues, has a net c positive charge greater than 1 and has an amino acid sequence such that positive charge greater than 1 and has an amino acid sequence such that corresponding amino acid sequence comprising only L-amino acid residues a corresponding amino acid sequence comprising only L-amino acid residues a corresponding amino acid sequence comprising only L-amino acid residues including bacterial, fungal, viral, mycoplasma and protozoan infections. They may be used in both human and veterinary medicine. They may also be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        a corresponding amino acid sequence comprising only L-amino acid residues is not found in nature. The cytolytic agents may be used for treatment of cancer or for treatment of several diseases caused by pathogens, including bacterial, fungal, viral, mycoplasma and protozoan infections. Including be used in both human and veterinary medicine. They may also be used as disinfectants for destruction of microorganisms, i.e. in solutions for wetting contact lenses, as preservatives, e.g., in the cosmetic and food industries, as pesticides (e.g. fungicides or bactericides) or for preservation of agricultural products.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAW82859 standard; peptide; 77

-i- FUNCTION: THE SIGMA FACTOR IS AN INITIATION FACTOR THAT PROMOTES ANTACHMENT OF THE RNA POLYMERASE TO SPECIFIC INITIATION SITES AND THEN IS RELEASED. THIS SIGMA FACTOR IS RESPONSIBLE FOR THE EXPRESSION OF SPORULATION SPECIFIC GENES (BY SIMILARITY).

-i- SIMILARITY: BELONGS TO THE SIGMA-70 FACTOR FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       STRAIN-ATCC 824 / DSM 792 / VKM B-1787;

B "Mapping of replication initiation site in Mycoplasma capricolum T genome by two-dimensional gel-electrophoretic analysis.";

I Nucleic Acids Res. 21:4816-4823(193).

C -!- FUNCTION: Rassep catalyzes the removal of the 5'-leader sequence the mature 5'terminus. It can also cleave other RNA substrates such as 4.5S RNA. The protein component plays an auxiliary but essential role in vivo by bindi to the 5'-leader sequence and broadening the substrate specificity of the ribozyme (By similarity).

C -!- CATALYTIC ACTIVITY: Endonucleolytic cleavage of RNA, removing 5'
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches
